Client-Server Installation	6
Changing between local and network modes	
Switching between 2 network installations	

Introduction

In this document, you will find the steps to install Superlock II as a standalone program for a single computer, as well as the steps and requirements to perform a network installation (a installation where the client and the database are in different computers).

Installation

Standalone Installation

<u>Step 1</u>

After executing the Superlock II installer and accepting the terms of service, a new window will appear with the following options:

Installer Superlock	
Welcome to the Installer Superlock Setup Wizard Product version to install: 1.0.2.0 Installed version detected:	
Please select an option to install:	
 Standard installation (recommended) Custom installation 	
Superlock Client Stand alone Client/Server	
✓ Database Instance SUPERLOCK (SQL2012 Express Engine)	
Superlock Tool (Instance configuration)	
Install	Exit

- Standard installation: Installs a standalone version of the program, as well as the SQL Server engine necessary to create its database and the Superlock Tool.
- Custom Installation: With this option, you can select which components of the program you wish to install.

For a standalone installation we recommend the Standard installation, as it will install all the required components for Superlock II to work correctly.

<u>Step 2</u>

After selecting the desired options to install, Superlock II client, the Superlock II tool and the SQL server necessary for the program's database, will be installed. When it finishes, a new popup window will appear.

Questio	on			
8	The database does n	ot exist. Do you want	to create it?	
		Yes	No	
			_	
Warnin	g			
	The program needs t currently working wit	o make changes in th h the program until t	ne database. Please, m he changes to the da	nake sure that there are no users tabase have been applied
		Continue	Cancel	

Answering Yes to this, will create the necessary tables in the database and update it to its latest version.

Step 3

Migration				
0	It is possible to migrate data from the existing Sup requires access to the Superlock Windows Data fo want to start the migration process?	perlock Windows to th Ider to perform this n	ne new one. It nigration. Do you	
🗌 Don't sh	ow this message again	Yes	No	

On a first installation this message will appear, allowing the user to select the old Superlock's system folder and migrate its systems to the new Superlock II.

Usually the old Superlock's system folder, located on C:\, will look something like the example above.

<u>Step 4</u>

After a successful installation, the admin user will be created with no password.

Superlock II	X
Username	
admin	
Password	
Start session	

We strongly recommend changing the admin's password to increase security.

Client-Server Installation

<u>Step 1</u>

After executing the Superlock II installer and accepting the Terms of Service, a window will appear with different installation options. For a Client/Server configuration we'll have to select **Custom installation** and **Client/Server**.

Installer Superlock			
Welcome to the Installer Superlock Setup Wizard Product version to install: 1.0.2.0 Installed version detected:			
Please select an option to install:			
 Standard installation (recommended) 			
Custom installation			
Superlock Client O Stand alone O Client/Server			
Database Instance SUPERLOCK (SQL2012 Express Engine)			
Superlock Tool (Instance configuration)			
Install	Exit		

<u>Note</u>: On the machine we will be using as a Server, we'll have to, at least, install the Database Instance of the program. (If there isn't a SQL Server installed already)

Installer Superlock			
Welcome to the Installer Superlock Setup Wizard Product version to install: 1.0.2.0 Installed version detected:			
Please select an option to install: Standard installation (recommended) Custom installation			
Superlock Client Stand alone Client/Server			
☑ Database Instance SUPERLOCK (SQL2012 Express Engine)			
Superlock Tool (Instance configuration)			
Install	Exit		

Step 2

After selecting the Client/Server installation, we will be presented with the next screen:

	SUPERLOCK II	
CLIENT/SERVER SETUP SETTINGS: 1 - Please fill fields with the connection settings and check the connection. 2 - Please select a shared migration target folder. After this you can continue the installation.		
	Server: Database: Port Username: Password: Set default password Check connection 2	1
Set Migration Shared Path		Ok Cancel

In this screen we will have to fill the Server information, as well as select a Public directory to use as migration file storage.

- 1. Fill the server information.
 - 1.1. Server: The server's name or IP address.
 - 1.2. Database: The name of the Database to create/use. On a new database, this field's value is up to the user.
 - 1.3. Port: The port from which the database is listening to petitions.
 - 1.4. Username: The username to connect to the database. By default it's sa
 - 1.5. Password: The password to connect to the database. We can press the 'Set default password' button if we have not changed it
- 2. Check connection: Once we fill the Database Server information, we must check the connection. If the connection fails or is not checked, we won't be able to continue the installation.
- 3. Set Migration Shared Path: Here we will have to select a public folder where the migration files from the old Superlock will be stored.

Once we have completed all the steps listed above, we can press OK and proceed with the installation.

Step 3

After installing the program, the first time it is run, we'll be asked to create and update the database.

Questic	on and a second s
8	The database does not exist. Do you want to create it?
	Yes No
Warnin	g
A	The program needs to make changes in the database. Please, make sure that there are no users currently working with the program until the changes to the database have been applied
	Continue Cancel

<u>Step 4</u>

On a first installation this message will appear, allowing the user to select the old Superlock systems folder and migrate its systems to the new Superlock II.

If we choose to migrate the old systems, a browse window will appear, where we'll have to select the SLWIN directory of the old Superlock.

Usually the old Superlock's system folder will look something like the example above, located at C:\.

<u>Step 4</u>

After a successful installation, the **admin** user will be created with no password.

۶ 🔊	Superlock II	×
Username		
admin		
Password		
	Start racian	
	Start session	

We strongly recommend changing the admin's password to increase the security.

Changing between local and network modes

If we want to change from a Stand-alone to a Server/Client installation we can do so by going to the Setup tab in Superlock II and selecting Network settings.

10日	- <i>p</i> -	Superlock II	≛ admin + 💷 🗗 🗙
•	Setup		
Information			
System List	<u></u>	ARC 123	==
Lock Type List	Company data	System number series	Define additional fields
User List			
Master Key Code List			
Setup	_		
About	Printing / Export Files	Backup Options	User Language
Close			
	Mgrate data	Network settings	
			Superfack II Version 1.0.2

Once in the Network settings window, we can see the option to switch between both standalone and Client/Server modes.

Network settin	gs			Network settings
Network insta Network insta Local installat	Illation 1 Illation 2 ion			Network installation 1 Network installation 2 Eccal installation
Server	localhost			Check connection
Database	SUPERLOCK			
Port	1434			
Username	sa			
Password	•••••	Set default password]	
s	pecify the migrated system	s folder		
_		Browse		
	Check connection			
		OK Cancel		OK Cancel

When switching to a Network installation, we will have to enter the information of the Database Server, as well as selecting the migrated systems folder.

After switching to either one of the installation modes, a program restart will be necessary to connect to the new database.

Switching between 2 network installations

Superlock II offers the possibility to setup two different network installations, each with its own database, to allow the user to work with two different sets of systems.

To switch between the two networks, in the setup menu, we will select Network Settings and, on the popup window that will show, fill the information for both servers.

Master Key Code List					
Setup About Close	Printing	/ Export Files		Backup Options	
	Migrate data			Network settings	
Network settir	ngs		Network settir	ngs	
Network settir	1 gs allation 1		Network settir	ngs	
• Network settin • Network inst	IGS allation 1 sillation 2		Network settir O Network inst O Network inst	allation 1	
Network settir Network inst Local installar	1 GS allation 1 allation 2 tion		Network settin O Network inst O Network inst Local installa	ngs allation 1 allation 2 tion	
Network settir Network inst Network inst Local installar Server	Igs allation 1 allation 2 tion DBServer 1		Network settir Network inst Network inst Local installar Server	ngs allation 1 allation 2 tion DBServer 2	
Network settir Network inst Local installa Server Database	Igs allation 1 allation 2 tion DBServer 1 SUPERLOCK		Network settin Network inst Network inst Local installa Server Database	ngs allation 1 allation 2 tion DBServer 2 Superlock	
Network settin Network inst Network inst Local installa Server Database Port	Igs allation 1 allation 2 tion DBServer 1 SUPERLOCK 1434		Network settir Network inst Network inst Local installa Server Database Port	Igs allation 1 allation 2 tion DBServer 2 Superlock 1433	
Network settir Network inst Network inst Local installa Server Database Port Username	allation 1 allation 2 tion DBServer 1 SUPERLOCK 1434 sa		Network settin Network inst Network inst Local installa Server Database Port Username	Igs allation 1 allation 2 tion DBServer 2 Superlock 1433 sa	
Network settin Network inst Network inst Local installa Server Database Port Username	Igs allation 1 allation 2 tion DBServer 1 SUPERLOCK 1434 sa	Set default password	Network settir Network inst Network inst Local installar Server Database Port Username Password	Igs allation 1 allation 2 tion DBServer 2 Superlock 1433 sa	Set default password
Network settir Network inst Network inst Local installar Server Database Port Username Password S	Igs allation 1 allation 2 tion DBServer 1 SUPERLOCK 1434 sa	Set default password	Network settin Network inst Network inst Network inst Local installa Server Database Port Username Password S	Igs allation 1 allation 2 tion DBServer 2 Superlock 1433 sa	Set default password
Network settin Network inst Network inst Outainstalla Server Database Port Username Password S	Igs allation 1 allation 2 tion DBServer 1 SUPERLOCK 1434 sa	Set default password	Network settir Network inst Network inst Local installa Server Database Port Username Password S	Igs allation 1 allation 2 tion DBServer 2 Superlock 1433 Sa Sa Sa	Set default password
Network settin Network inst Network inst Local installa Server Database Port Username Password S	Igs allation 1 allation 2 tion DBServer 1 SUPERLOCK 1434 sa sa sa cecify the migrated system Check connection	Set default password	Network settin Network inst Network inst Network inst Local installar Server Database Port Username Password S	Igs allation 1 allation 2 tion DBServer 2 Superlock 1433 sa sa specify the migrated syste	Set default password

Now we can easily switch between the two databases by selecting one or the other in the Network Settings window. Each time we change the current installation, the program will restart to load the new network settings.
